SKILLS

Cloud & Platforms

Azure · AWS · GCP · Databricks

Programming

Python · SQL · Bash · TypeScript

Data Engineering

ETL · Airflow · Data Modeling · Data Lake · Metadata Management · Unity Catalog

DevOps Engineering

Terraform · Docker · Kubernetes · Ansible · Azure DevOps · GitHub Actions

Methodologies

Agile · Scrum · FinOps

CERTIFICATIONS

- ✓ Microsoft Certified: Azure Administrator Associate
- ✓ Microsoft Certified: Azure Data Engineer Associate
- ✓ Microsoft Certified: DevOps Engineer Expert
- ✓ Google Professional Data Engineer
- ✓ Databricks Certified Associate Developer for Apache Spark 3.0
- ✓ AWS Certified Big Data – Specialty
- ✓ AWS Certified Solutions Architect Associate
- ✓ AWS Certified Cloud Practitioner
- ✓ Oracle 11G Implementation Specialist
- ✓ TD14 Certified Professional
- ✓ Professional Scrum Master

A DAY OF MY LIFE

SUMMARY

Results-driven Data Platform Engineer with a strong background in designing, automating, and optimizing modern data infrastructure for large-scale analytics and processing. Passionate about building resilient platforms that balance innovation with environmental and cost-conscious responsibility.

EXPERIENCE

ABN AMRO Bank N.V.

Amsterdam, Netherlands

Senior Data Platform Engineer — Aug 2023 – Present

- Designed and deployed scalable Databricks lakehouse architecture on Azure for the bank's next-gen Data & AI platform
- Automated infrastructure provisioning on Azure using Terraform and Helm-based deployment on AKS
- Implemented Unity Catalog setup and feature development for bank-wide data governance
- Implemented CI/CD best practices for data engineering using Databricks Asset Bundles (DAB)
- Set up modern ingestion and ETL way of working for domain data teams
- Templating using Cookiecutter for automating the creation of repositories
- Working with sustainability team on FinOps to optimize cloud resource usage and reduce cost
- Contributor in the data engineering community, sharing best practices and mentoring peers
- Responsible for building and maintaining a reliable and scalable orchestration framework using Airflow (AKS)

ABN AMRO Bank

Amsterdam, Netherlands

Senior Data Engineer — Jan 2020 – Jul 2022

- Designed and implemented data pipeline architecture for Domain Data Store
- Designed and implemented Data Quality Framework for proactive monitoring and reporting of DQ issues
- Built command line utility to automate generation of ETL configuration, reducing development time and manual errors
- Guided the data engineering community on best practices and solution design
- Reduced processing of historical data through parallel data processing architecture
- Worked with Databricks to optimize product usage and reduce cost

NN Investment Partners

Den Haag, Netherlands

Freelance Senior Data Platform Engineer — Aug 2022 – Aug 2023

- Designed and built end-to-end application stack on AWS
- Created ETL historical load engine to process data into application
- Guided the team on data engineering best practices
- Built reference database using graph database (Neptune)
- Automated infrastructure using CDK (TypeScript) and CloudFormation
- Set up and authored/orchestrated data pipelines using Airflow

Datlinq - a Roamler Company

Rotterdam, NL

Senior Data Engineer — Aug 2019 – Jun 2020

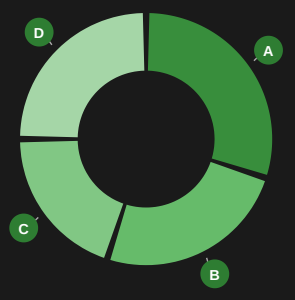
- Designed and delivered scalable, cost-efficient data pipelines for real-time and batch workloads
- Set up a containerized orchestration environment with automated DAGs for data workflows
- Architected and implemented a unified, centralized data store to improve data accessibility
- Led migration of data infrastructure from GCP to AWS, achieving a 30% cost reduction
- Enabled automated recommendation services through efficient pipeline design
- Built and optimized real-time data streaming solutions for business-critical applications

Aegon Nederland

Den Haag, NL

Senior Data Engineer — Feb 2019 – Jul 2019

- Designed and built data pipelines using AWS Glue to ingest data into the finance publication layer
- Set up a data lake for financial data sources
- Created metadata-driven data ingestion and processing
- Set up CI/CD pipeline and infrastructure services using CloudFormation and Ansible



- **A** Community Engagement to address the questions and requirements from internal users and data platform consumers
- **B** Code reviews and Pair programming
- **C** Teams Q&A and knowledge sharing
- **D** Collaborating with business squads and product owners to define new features, align on priorities, and support product release planning

Accenture

Bangalore / Amsterdam, NL

Digital Data Engineer

Jan 2009 – Dec 2018

- Worked with a data lake environment and ingested numerous data sources (modem logs, CDRs, commercial data, weblogs) into HDFS
- Planned and executed a semantic layer to expose data to downstream applications
- Created reusable and portable ETL solutions for data pipelines
- Documented projects with version control and automated integration with CI/CD pipeline
- Rationalised manual reporting services and built integrated data warehouse solutions
