linkedin.com/in/ramu-kamath-b5b40499

Den Haag, NL

SKILLS

Cloud & Platforms

Azure · AWS · Databricks

Programming

Python, SQL, Bash

Data Engineering

ETL · Airflow · Data Modeling · Datalake · Metadata Management

DevOps Engineering

Terraform · Docker · Kubernatees · Ansible · Azure Devops · GitHub

Methodologies

Agile · Scrum · FinOps

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate

Microsoft Certified: Azure Data Engineer Associate

Microsoft Certified: DevOps Engineer Expert

Google Professional Data Engineer

SUMMARY

Results-driven Data Platform Engineer with a strong background in designing, automating, and optimizing modern data infrastructure for large-scale analytics and processing. Passionate about building resilient platforms that balance innovation with environmental and cost-conscious responsibility.

EXPERIENCE

ABN AMRO Bank N.V. — Amsterdam, Netherlands

Senior Data Platform Engineer — 08/2023 - Present

- Designed and deployed scalable **Databricks lakehouse architecture** on Azure for banks nextgen Data & AI platform
- Automated infrastructure provisioning **Azure** using Terraform and Helm based deployment on AKS
- Implemented **Unity Catalog** Setup and feature development for bank wide data governance
- Implement CI/CD best practices for dataengineering using **databricks asset bundles(DAB)**
- Setting up modern **ingestion** and **ETL** way of working domain data teams
- **Templating** using cookie cutter for automating the creation of repositories
- Working with sustainability team on **FinOps** to optimize the usage of cloud resources and reduce the cost
- Contributor in the **data engineering community,** sharing best practices, mentoring peers, and knowledge sharing
- Responsible for building, maintaining reliable and scalable orchestration **framework** using Airflow(AKS)

NN Investment Partners — Den Hague, Netherlands

Freelance Senior Data Platform Engineer — 08/2022 - 08/2023

- Design and Build end to end application stack on AWS
- Created ETL historical load engine to process data into application
- Guide the team on data engineering best practices
- Building reference database using graph database(Neptune)
- Automating the infrastructure using CDK(type script) and CFT
- Setting up and authoring/orchestrating data pipelines using airflow

CERTIFICATIONS

Databricks Certified Associate Developer for Apache Spark 3.0

AWS Certified Big Data – Specialty

AWS Certified Solution Architect Associate

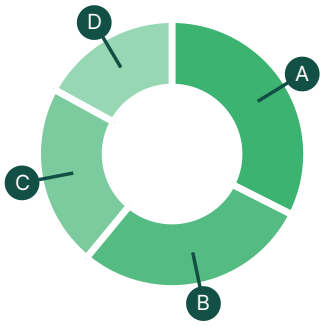
AWS Certified Cloud Practitioner

Oracle 11G implementation Specialist

TD14 Certified Professional

Profession Scrum master

A DAY OF MY LIFE



- A Community Engagement to address the questions and requirements from internal users and data platform consumers
- B Code reviews and Pair programming
- C Teams Q&A and knowledge sharing
- D Collaborating with business squads and product owners to define new features, align on priorities, and support product release planning

EXPERIENCE

ABN AMRO Bank — Amsterdam, Netherlands

Senior Data Engineer — 2020 - 07/2022

- Designed and Implemented data pipeline architecture for Domain Data Store
- Designed and Implemented Data Quality Framework which helps the business to proactively monitor and report DQ issues
- Built command line utility to automate the generation of the ETL configuration which reduces development time and remove manual configuration errors
- Guiding the data engineering community for data engineering best practices and solution design
- Reduced the processing of historical data(parallel data processing architecture)
- Working with Databricks to optimize the usage of databricks products to reduce the cost for the company

Datlinq - a Roamler — Rotterdam, NL

Senior Data Engineer — 08/2019 - 06/2020

- Designed and delivered scalable, cost-efficient data pipelines for real-time and batch workloads.
- Set up a containerized orchestration environment with automated DAGs for data workflows.
- Architected and implemented a unified, centralized data store to improve data accessibility.
- Led the migration of data infrastructure from GCP to AWS, achieving a 30% cost reduction.
- Enabled automated recommendation services through efficient pipeline design.
- Built and optimized real-time data streaming solutions for business-critical applications.

Aegon Nederland — Den Haag, NL

Senior Data Engineer — 02/2019 - 07/2019

- Design and Build data pipelines using AWS Glue to ingest the data into finance publication layer
- Setting up datalake for financial data sources
- Created metadata data driven data ingestion and data processing
- Setting CI/CD pipeline and infra services using cloud formation and **Ansible**

Accenture — Bangalore/Amsterdam, NL

Digital Data Engineer — 2009 - 2018

- Working with a data lake environment and ingested numerous data sources such as modem logs, CDRs, commercial data, weblogs into the HDFS file system.
- Planned and executed a semantic layer to expose data to downstream applications, automated the ETL build to load data into the semantic layer.
- Creating reusable and portable ETL solutions for data pipelines
- Documented projects with version control and automated integration with CI/CD pipeline.
- Rationalising manual reporting services and building integrated datawarehouse solution
